

Technology Leadership Board – Accelerate Deployment Workstream

Accelerate Deployment is one of three TLB workstreams (including Digital and North Sea Transition) <http://www.the-tlb.com/workstreams.html>, the being to speed up the use of proven technologies that can add further value to the basin. Three areas focused on so far:

- **Focus Area 1** – NZTC supported technology
- **Focus Area 2** – Reaching out to the wider supply chain, including innovations already deployed in other industries

<http://www.the-tlb.com/ukcs-technology-managers-network.html>

- **TMN** – Promote the output from 1 & 2 through the Technology Managers’ Network

Technology Managers’ Network:

Previous meetings this year

- February – Technology providers presented on flare & vent measurement and reduction technology
- May – Operators shared examples of where they have successfully deployed technologies, plus the challenges they have faced

For todays TMS, we will focus on Non-Intrusive Inspection, to see if better industry communication on NII current usage, benefits, and operators’ experiences can increase wider industry confidence in adopting NII technologies.

1. Carlo will provide some insights from across the basin on NII.
2. Based on attendees feedback at the May TMN, where two operators focused on NII, we have invited Louise Atkin to present the HSE views on new technologies in the context of NII, followed by Q&A.
3. Stefan Kent of Kellas Midstream and Ernie Lamza of NSTA will introduce their accelerated field trial initiative intended to get NII focused technologies ready for deployment quicker.
4. Colin Black and Vincent van Beusekom will talk about facilitating wider access to the UK Energy Technology Platform & Technology Catalogue.
